	delicious and lay beautifully oiled in its pot, for the old woman
	was truly an expert in the art of cooking. "Just wait a

moment," she said to the youth. "I am rushing off to the well. The fish is ready but there is no water for making the bread."

Lo! as soon as the old woman had hobbled away, the youth sent his hand exploring the depths of the fish pot. It emerged grasping a dainty slice of steaming fish. But the fish was piping hot and since it burnt the youth's hand he rushed it into his greedy mouth. Well, mouth-the-cooler helped with the heart, but it was still a hard job chewing the fish and sorting out bones. Lo! what a world this is! A long sharp fish bone stuck in the youth's throat, and tried as he would, but there was no way of freeing it. When granny came from the well, she found her grand guest speechless, gasping for air like a drowning man. "People of our land, greed is a mighty evil. Evil.'

Read the following passage and answer questions 41-

Birds that migrate are not always harmful to crops. Sometimes their visits help farmers. For example, birds that feed on insects may eat the beetles and worms that might destroy a farmer's maize and potatoes.

How do birds find their way? They cannot read maps or compasses yet they may leave their homes in Europe, travel thousands of kilometres into Africa, then return

without getting lost. We cannot fully understand how they do this. There is a bird called Sedge Warbler, who likes to live in reeds and marshy places on the edge of the lake.

Scientists have studied these birds in West Africa. They have found that some sedge warblers from Europe came to the same patch of reeds in Nigeria year after year

on their visits.

These birds, most of course fly over the Sahara desert to reach Nigeria from Europe. They have to cross it again on the return journey. The scientists couldn't see how the birds got enough to eat during the crossing.

then they found that before flying over the desert, the birds eat a lot for several weeks. They become fat and nearly doubled their weight. This fat gave them energy for

their flight.
